

CSP-II FIRE spectra: early $[-7, 7]$ to late $[10, 20]$ rest-frame days

● WIRC – RC1 ● WIRC – RC2

Measured spectra at each object's redshift

Same delivered spectral shapes, redshifted

Descriptive contrasts; no uncertainty bars or cosmological inference. Static zero points and gray scaling cancel.
 Telluric, calibration, timing and population-transfer limits remain; target-z transport is not an observed high-z sample.
